VIDEO CONSOLE SOFTWARE MODULE

Main Interface intuitively displayed in four views:

- (1) Scene view, structure, 3D renderings and multi-level switching.
- (2) Map view, Zoom in and out, terminal location customization.
- (3) Video view, View video quickly and link one-button broadcast.
- (4) Grid view, Display running status, supportive of knowing complete terminal information and initiating operation directly.

Choosing zone freely to make voice broadcasting, with two kinds of broadcast methods: 1) To use IP microphone 2) To use computer speaker and microphone directly.

No geographic area limitation for the Video console software. Available for initiating broadcast to other terminals as long as it can communicate with the server, supportive of crossing network segment and router.

License:

Each server requires a dongle as a professional license which allows 1000 terminals to be logged in. The system allows maximum 100 servers interconnection which expands capacity to 100,000 terminals.
